# Goltseva Victoria Andreevna (21 years old)

Minsk, Belarus | goltseva.viktoria@mail.ru | +375447789770

## EDUCATION

**Belarusian State Economic University**                                                                                                **Minsk, Belarus**

*Bachelor of Marketing and Economics | GPA: 3.7*                                                                  *September 2019 — June 2023*

**IT-school "Itlogia"**                                                                                                                                **Minsk, Belarus**

*Frontend-developer (Key languages: JavaScript and TypeScript. Main framework: Angular)*          *August 2022 — July 2023*

- **Relevant Courses:** "Creating websites on the tilda platform and design in Figma" (July 2022), "How to learn to make landing pages from scratch on the lpmotor constructor" (August 2020)

## WORK EXPERIENCE (implemented about 26+ projects: SPA-applications, landing pages, web-design for landing pages + layout)

**Marketing Automation Platform for Businesses on Angular (The USA)**          **EtaCar Systems (IT-company | Internship)**

*Frontend-developer*                                                                                                                      *October 2023 — January 2024*

- American project was written by Indians in 2018 year on Angular. I figured out the existing code, changed layout, did redesign according to technical task, rewrote code from JavaScript to TypeScript, fixed bags, refactoring, introduced new functionality such as posting photos and videos in facebook and instagram (schedule or at once), recoloring pictures according to colors of logo, using PredisAi with help of ngrok (showing photos and videos which were generated using user's quieries). In addition to this, introduced custom code on and off videos. As well as used Adobe Photoshop for recoloring the pictures pixel by pixel. The project uses MongoDB. I learned to use AWS (especially S3 and logs for backend part). Besides I had experience with Express NodeJs (on basic level). Changed schemes, implemented Sharp for compressing image, changed node-cron for posting photos and videos, fixed bags and etc.

**Online Store on Angular**

*Frontend-developer*

- Created an SPA-application on Angular, implemented authorization, registration, catalog, pagination, cart of products, page of favorites, page for making an order, personal account, order page. Working with MongoDB

**An SPA-application for accounting of household finances with authorization.**

*Frontend-developer*

- Implemented an application on <u>native</u> JavaScript. Layout on Bootstrap in full. Functionality for adding/removing/changing household income and expenses, a summary in one table and the implementation of graphics using the chart.js. Added authorization and registration for users. Also this project has been rewritten into TypeScript

**Quiz on native JavaScript, TypeScript and rewritten on Angular**

*Frontend-developer*

- Implementation of authorization and registration, selection of tests (request from the backend), when answering questions, you can go forward /backward / skip the question, progress has been realized. The test ends after 60 seconds if the user doesn't have time to pass it. Next, the test results are shown (correct answers / total number of questions). When you click on the "Viewing the answers" you can see which question was given the correct answer, as well as the wrong answer

**Landing pages for one of the LARGEST IT-school "Itlogia"**

*Frontend-developer | HTML coder*

- It was important to take into account the already existing sets of styles and naming that were developed at this school for past intensive landing pages. Achieved the set result by completing the task in 5 days. From 1000 to 2000 people are registered every month. References to them: https://itlogia.ru/intensive/front (for "Frontend Start") | https://itlogia.ru/intensive/uxui (for "UX/UI design")

## LEADERSHIP EXPERIENCE & ACTIVITIES

**Curator of the course on "Frontend Start" in the IT-school "Itlogia"** *(20.04.2023 — until now)*
- Checking homework (building landing pages), finding bugs in the code and correcting errors, curating the chat, helping to sort out errors that arise, creating a friendly atmosphere in the chat, checked about 1,400 homeworks. I was in the first place of the curators, as I checked a greater number of homework assignments among the rest

**Helper of the course on "Frontend Developer " in the IT-school "Itlogia"** *(20.04.2023 — until now)*
- I was chosen as a helper in IT-school "Itlogia'. Responsibilities: figuring out with technical difficulties when taking a course students, answer on questions, help to understand the code

**FREELANCE (1 year experience)** links on some projects and describing:

- https://vampodarki.by (**Wholesale of New Year's gifts**). Responsibilities: HTML-layout + upload to hosting + SSL.
- https://latebeaute.com (**Website for advertising a cosmetic brand**). Responsibilities: marketing research, writing catchy text for whole website, creating UX/UI design according to technical tasks, HTML-layout + animation + upload to hosting.
- https://podarochkin.by (**Sale of gifts**). Responsibilities: HTML-layout + upload to hosting + SSL.
- https://ritualscorb.by (**Funeral Agency**). Responsibilities: creating UX/UI design according to technical tasks. HTML-layout + upload to hosting + SSL.
- https://itsnotviktoriaaa.github.io/atlantGranit/ (**Production and Installation of Monuments**). Responsibilities: marketing research, writing text for whole website, make the right design in accordance with the theme, creating UX/UI design, HTML-layout + animation.
